Department of Computer Science and Engineering

ASSESSMENT TOOL 2 – CASE STUDY

Course Code:	CSA0620	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO3: Articulation (BL4, BL5)	Assessment:	Assessment Tool 2 – Case Study
Weightage:	20% of CIA	Total Marks:	100
CO3 Statement:	Design Divide and Conquer algorithms for Merge Sort, Quick Sort, Binary Search and Matrix Multiplication		
Student Name:	Sairaj C	Reg. No.:	192411018
Section / Batch:	2024	Date:	04-08-2026

Instructions to Students

- Answer the following question. Total Marks: 100.
- Carefully analyze the given case study questions.
- Explain in detail with sample code if needed.
- Clearly identify all key issues, provide an in-depth analysis, and propose innovative, feasible solutions with strong justification.

Question Type	Focus Area	Questions
Case Study	Focus on Design Divide and Conquer algorithms: Merge Sort, Quick Sort, Binary Search and Matrix Multiplication	Q1

SECTION A – CASE STUDY

Q1. An advertisement platform ranks ads based on relevance and bid value. Analyze how Quick Sort can be applied for efficient ranking. Identify issues such as pivot selection and data distribution. Apply divide and conquer techniques. Analyze performance and propose optimizations with justification.

Q1
Network Packet Analysis System
(Sorting + Binary Search)
100 marks

1/1 answered

A network monitoring system processes large volumes of packet data that must be sorted and searched efficiently. Analyze how sorting algorithms and Binary Search can be combined. Identify issues such as processing speed and data size. Apply divide and conquer techniques in both stages. Analyze overall time complexity and justify the solution.

Your Code

```

1 from bisect import bisect_left
2
3 def merge_sort(arr):
4     if len(arr) <= 1:
5         return arr
6     mid = len(arr) // 2
7     left = merge_sort(arr[:mid])
8     right = merge_sort(arr[mid:])
9     return merge(left, right)
10
11 def merge(left, right):
12     result = []
13     i = j = 0
14
15     while i < len(left) and j < len(right):
16         if left[i][0] <= right[j][0]:
17             result.append(left[i])

```

Input

stdin input

Output

Sorted packets: [('10.1.1.2',
'172.16.0.3', 443, 1670),
(('192.168.1.5', '10.0.0.2', 80,
1650), ('192.168.1.5',
'10.0.0.9', 22, 1690),
(48.8.8.8', '1.1.1.1', 53, 1600)]

Code of Conduct

I Sairaj C(192411018) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION

Case Study					
Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Case	25%	Thorough understanding; clearly identifies all key issues	Good understanding with most issues identified	Basic understanding; some issues missed	Poor understanding; problem not identified correctly
Application of Concepts	25%	Effectively applies relevant concepts to analyze the case deeply	Applies appropriate concepts with minor gaps	Limited application of concepts	Fails to apply relevant concepts
Analysis	20%	In-depth analysis with strong reasoning and insights	Good analysis with logical reasoning	Basic analysis with limited depth	Weak or no analysis; lacks reasoning
Solution Design	20%	Innovative, feasible solutions with strong justification	Logical solutions with adequate justification	Basic solutions with weak justification	Incorrect or no solution provided
Clarity	10%	Clear, wellstructured, and easy to understand	Organized and understandable presentation	Limited clarity and structure	Poor clarity; difficult to understand

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Case	25%				
Application of Concepts	25%				
Analysis	20%				
Solution Design	20%				
Clarity	10%				
Total Marks (100):
